                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          გ
                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠ
                processe has trypain. It is activity, specifically cleaving peptide chains on the carboxyl side of a basic anion acid (e.g., arginine or 1ysine). It has a pH optimum of absic anion acid (e.g., arginine or 1ysine). It has a pH optimum of 7-8, and is stable between pH 5 and pH10. It has a temperature optimum of approximately 40 degrees Colsius, and is stable between 40 and 80 degrees Celsius. The invention also relates to a temperature optimum of approximately 40 degrees Colsius, and is stable the processe in process. The invention also relates and is stable the properation of the novel serine processe, and the use of the processe in process degredation. The argive has cosquiant, phypertensive and arti-inflammatcry effects. It may also be used in the properation of processin degrees Sequences AAB03086-803089 represent the N-terminal 20 amino acids of trypsin from a variety of organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Fish; serine proteinase; pain; acute inflammation; chronic inflammation; architits; inflamed joint; burstites osteoattrities; septic architits; rheumatoid architits; septic architits; systemed joint brenumatoid architits; fibromyalgia; systemed lupus erythematoous; philabitis; tendinitis; rash; psoriasis; acres, cerama; facial seborthaic eczema; foreskin infection; septication; achieve foot; figtulae infection; uccer; navel infection; wrinkle; scar; kalloid; boll; wart; allergic icch; hemorrhoid; wound; fungal infection; autofmmune disease.

The database is useful for determination of unknown biological function of a protein or polypeptide based on the homology of amino acid sequence, e.g. sterior structure of protein, and includes retrieval and evaluation of homologous relationship for the determination of mostly resembling presumption of protein and polypoptide having biological functions.
face or neck, foreskin infections, athlete's foot, fistulae infections, infected topical ulcers, navel infections in newborns, withles, scars, welloids, boils, water and allergic itch, hemorrhoids, wounds an infections, wounds from burns, fungal infections and immunological and autoimmune diseases. They are also useful for removing dead or pealing skin from otherwise healthy skin, and for treating or preventing a disease in which pathogenesis is caused by bacteris, virus, fungue, parasite or a protozon or a receptor mediated binding is involved. The present sequence represents the amino terminal of bovine trypsins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protein function; trypsin; bovine; homology; resemblance.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the TRYP protein.

The invention relates to a database containing information on the amino the invention relates to a database containing the biological functions are known. The database also contains additional information on the score of importance of each aa residue in the whole as acquence in determining the known biological functions. The invention also relates to a method of preparing an alignment between as sequences contained in the database and those of the unknown polypeptide. This is represented as the homology contained state, each being identified as having a high score of amongst various sites, each being identified as having a high score of importance in determining potential biological functions. The method is used to enable an efficient estimation of the biological functions of their as a sequences. Suitable proteins can then be isolated and purified by various means. This could be of considerable use in a biological and medical context. The computerised procedure is efficient, fast and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                              ద
                                                                                                                                         The invention relates to a transgenic plant that comprises DNA encoding an active or inactive form of a heterologous processe (e.g., trypsin).

The nucleotide sequence encoding the processe is operably linked to a promoter to effect expression of the processe in the plant. The transgenic plant is used in a method of producing processe in commercial quantities, comprising the extraction of the processe from the plant of the content source of trypsin is the organs of animals. One of the main difficulties with this source is that there is considerable contenting by other processes. Chymotrypsin is one of the additional contenting the expression of the processe of the invention overcomes the problem of contentination by other protesses. By directing the expression of the processe to the seed of the plant, the problem of expression of the processe or the method of the proteins in the plant, resulting in cell death is covercome. The processe the problem of expressing the processe and covercome. The problem of expressing the processe or the resemblement sequence expression processes and covercome. The processe was used in the construction of a plant expression plasmid in the exemplifications of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                      Transgenic plant containing DNA encoding a heterologous protein, used for the commercial production of protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

This sequence shows a claimed recombinant trypsin. The trypsin is produced by cleavage of a trypsinogen analogue (A491255). A wild type bovine trypsinogen was mutated to destroy the trypsin cleavage site. The lys residue present in the leader sequence of the native bovine trypsinogen procein was mutated to an Asp residue. The vector was constructed such that DNA encoding a (Glu-Ala)2 peptide was inserted between the C-terminus of the alpha factor signal and the N-terminus of the trypsinogen analogue leader sequence to improve the yield of the secreted procein. The specification claims an isolated trypsinogen analogue that was the yield of the analogue comprising a protein having trypsin activity and a leader
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New trypsinogen analog useful for the production of recombinant trypsin has a modified leader sequence not cleavable by trypsin or trypsin-like

Trypsin is a serine procease which cleaves the peptide bond on the carboxy-terminus of basic amino acid residues. Trypsin is synthesised in a slightly longer catalytically inactive form: trypsinogen, which itself is cleaved (leader sequence removed to give trypsin. The leader sequence of the present protein consists of ((Asp) 4-tys) and is present at the amino-terminus. This protein has two additional residues at the amino-terminus: Met and Phe. Bovine met-phe-trypsinogen is useful for the manufacture of recombinant protein pharmaceucicals. High purity trypsin products are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New chymotrypsin-free trypsin and trypsinogen useful for manufacturing recombinant protein pharmaceuticals and pure trypsin -

The wild type bovine trypsinogen was mutated to destroy the trypsin cleavage site. The lys residue present in the leader sequence of the native bovine trypsinogen protein was mutated to an Asp residue. The vector was constructed such that DNA encoding a (Glu-Ala)2 peptide was inserted between the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New trypsinogen analog useful for the production of recombinant trypsin has a modified leader sequence not cleavable by trypsin or trypsin-like
produced by expressing trypsingen inside a prokaryotic cell which is then isolated and activated to form trypsin.

                                                                                                                                                                                                                                                                                                                                                                                                              trypsinogen analogue leader sequence to improve the yield of the secreted protein. The specification claims an isolated trypsinogen analogue comprising a procesn having trypsin activity and a leader sequence to insight are the sequence of trypsinogen analogue comprising a procesn having trypsin activity and a leader sequence having at least two amino acids which are not lays or Arg. A recombinantly produced trypsin (AVY91256) is also claimed. The trypsin characterization of other proteins, and in the manifacture of other recombinant bioproducts, for example to cleave leader sequences from small recombinant proteins expression of an inactive zymogen form the present method provides for expression of an inactive zymogen form the present method provides for expression of an inactive zymogen form the present and propeily folded yet is not activated until after a accomplished through the expression of a single chain trypsinogen analogue where the leader sequence is modified such that it lacks a trypsinile early me present invention lack a lysin or arginine in the continual leader sequence of the protein to prevent auto-activation or activation activation or activation activa

the combination of correspondence, and calculating a root mean square distance between the elements corresponding in the combination of correspondence. The method is useful for analysing three-dimensional structures of molecules, particularly proteins. To illustrate the invention, the serine proteases trypsin and elastase were used. The secent sequence is a partial sequence for trypsin. The histidine and method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              An almost complete pig trypsinogen (AAM08475) lacking the very Neternial and of the signal peptided is the product of a cDNA dione (AAT48978) isolated from a pig pancreas cDNA library. The CDNA clone can be fused to a signal sequence (e.g. from the native enzyme or tryps in transformed host calls, esp. filamentous fungus, e.g. Aspergillus soryzae or Aspergillus nigar. Levels of trypsin secreted by Aspergillus spp. are several-fold higher than those obtd. using other microbial systems.
                                                                                                                                                                                                                                                                                                                              Gaps

This sequence represents the canine anionic trypsinogen amino acid sequence. The protein was isolated from the canine plantees. The invention relates to monoclonal antibodies with specificity against canine trypsin, or canine trypsin.related substances. The antibodies are highly specific and can be used as reagent for quick and accurate detection and quantitation of canine trypsin and canine trypsin. It we immunoreactants in various forms. The antibodies can be used in the diagnosis of diseases such as puncreatific pancreatic cancer, renal
                                                                                                                                                                                                                                                                                                                      Anti-canine trypein monoclonal antibody, useful as reagent for quick and accurate defection and quantitation of trypsin and/or trypsin-like immunoreactants in various forms in diagnosis e.g. of pancreatic
   Anionic trypsinogen, dog, monoclonal antibody production, detect, diagnose, pancreatitis, pancreatic cancer; renal insufficiency, extrapancreatic hyposecretion.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents an immunogenic fragment of the canine anionic trypainogen amino acid sequence. The fragment corresponds to amino acid residuate 24 to 40 of the anionic trypsinogen protein sequence (see ANY3975). The invention relates to monoclonal antibodies with specificity against canine trypsin, or canine trypsin-tabled substances. The antibodies are highly specific and can be used as reagent for quick and accurate detection and quantitation of canine trypsin and canine trypsin-like immunoreactents in various forms. The antibodies can be used in the diamons of diseases such as pancreaticis pancreatic cancer, renal insufficiency and extrapancreatic hyposecretion.
                                                                                                                                                                             Canine anionic trypsinogen immunogenic fragment #2 amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Anti-canine trypsin monoclonal antibody, useful as resgent for quick and accurate devection and quantitation of trypsin and/or trypsin-like immunoreactants in various forms in diagnosts e.g. of pancreatic

Sequence 62, Application US/10131241

Publication No. US2030012792A1

GENERAL INFORMATION:

APPLICANT: Holaday, John W.

APPLICANT: Fortier, Anne H.

TILLE OF INVENTION: Compositions and Methods for Inhibiting Endothelial Cell Prolifer

TILLE DE INVENTION: Compositions and Methods for Inhibiting Endothelial Cell Prolifer

TILLE DE INVENTION: And Regulating Angiogenesis Using Cancer Markers

FILE REFERENCE: 0521-0344

THIO PRICATION NUMBER: US/10/131,241

CURRENT FILING DATE: 2002-07-31565

FRICATION NUMBER: US 09/413,049
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 18, Sequence 17, Sequence 44, Sequence 10, Seque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 36, Sequence 13, Sequence 5, A Sequence 5, A Sequence 9, A Sequence 9, A Sequence 9, A Sequence 9, A

-I CARALYTIC ACTIVITY: Preferential cleavage: Arg-|-Xaa, Lyg-|-Xaa.

-I GUBCELLUUAR ACTIVITY: Excracellular.

-I TISSUE SPECIFICTY: HIGH LEVELS ARE SEEN IN THE PANCREAS WHILE
LOWER LEVELS ARE FOUND IN THE LIVER, SPLEEN AND THYMUS.

-I SIMILARITY: BELONGS TO PEPTIDASE PANILY SI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Wang K., Gan L., Lee I., Hood L.E.;
